**\*\*Very High Shade Variation\*\*** Due to the inherent characteristics of all natural stones, variations are guaranteed and part of the natural beauty of each stone. Since stone tiles are cut from large blocks, the patterning may be consistent within one carton but vary greatly from the next. Before starting an installation, it is imperative that all tiles be blended and sorted so the complete range can be seen. Mixing the tiles from all cartons will ensure a more uniform and well blended overall look.

Note: All dolomitic stones tend to appear darker in color when the surface is polished whereas honed finishes appear lighter due of the nature of the duller surface. They also appear darker when they are wet. Field tile darkens significantly when installed.

Due to the inherent characteristics of this natural stone, the material will absorb moisture during the installation process and will look darker in appearance. As conditions will vary, it will take time for the product to fully cure and dry out.

Mosaic's honed and polished large format stone field tiles are all **micro-beveled**. This is an additional step that our manufacturers take to create a first quality, crisp and clean edge which in turn lends itself to a more beautiful installation.

Competitors do not always take this extra step. Typical stone in big box stores may have a straight cut edge, that shows chatter details such as this:

Please note: Mosaics and pencils do not have a microbevel. Also, Leathered finishes do not have a microbevel since the texture is applied all the way to the edges.

Mosaic's stones are a **premium selection** to ensure best possible results. The image on the left shows our inventory, while the image on the right shows the more diagonally veined and less consistent material that we have our manufacturers pull out to ensure that only the most beautiful premium stones arrive to us.
